

Principal Scientist, Bioanalytical Development

Company

Visterra is a clinical stage biotechnology company committed to developing innovative antibody-based therapies for the treatment of patients with kidney diseases and other hard-to-treat diseases. Our proprietary technology platform enables the design and engineering of precision antibody-based product candidates that specifically bind to, and modulate, key disease targets. Applying this technology to disease targets that are not adequately addressed by traditional therapeutic approaches, we are developing a robust pipeline of novel therapies for patients with unmet needs.

Visterra is a wholly owned subsidiary of Otsuka America, Inc., which is a U.S. holding company and a wholly owned subsidiary of Otsuka Pharmaceutical Co., Ltd. of Japan. Visterra has approximately 75 employees and is located in Waltham, Massachusetts.

Summary

The Principal Scientist, Bioanalytical Development is responsible for supporting activities related to transitioning drug development candidates into early clinical studies with a focus on developing bioanalytical methods for preclinical/clinical programs and transferring them to CROs. The Principal Scientist, Bioanalytical Development will be responsible for activities related to drug development candidates. They will oversee the execution of experiments to support IND filings and early clinical development with internal staff and external CROs.

Visterra is seeking a flexible candidate with a broad-based knowledge of immunology and biologics drug development. The primary focus will be bioanalytical support for programs in preclinical and clinical development, balancing long-term strategy with tactical and detailed technical decision-making and project management. This individual will be responsible for the design, execution and interpretation of experiments to develop bioassays and custom reagents to support late-stage research, and preclinical/clinical development. This individual will also be responsible for technical oversight, outsourcing, technology transfer and documentation of bioanalytical methods in support of preclinical/clinical programs and clinical biomarker strategy.

This is a full-time position based in Visterra's facility in Waltham, MA.

Responsibilities

- Develop large molecule bioanalytical methods and serve as internal expert on establishing and overseeing equipment/platform to support state of the art bioanalytical methods.
- Oversee method qualification and validation at external vendors of primarily ELISA/ECL based PK, ADA and biomarker assays to support large molecule drug candidates.
- Collaborate in the design, execution and interpretation of experiments to develop

bioassays and custom reagents to support late-stage research, and preclinical/clinical development.

- Oversee internal testing of preclinical samples.
- Contribute to biomarker strategy to assess exploratory biomarkers during early phase clinical trials.
- Oversee development of and maintain inventory of critical reagents.
- Present data at cross functional team meetings, summarize data in reports to support IND filings.
- Establish and maintain high-quality systems for outsourcing, managing and reporting data from preclinical and clinical studies that meet both regulatory guidelines and industry best practices.
- Effectively present data to mixed audiences including the executive team if required.
- Prepare and review reports and packages for regulatory submissions.
- Maintains a contemporary knowledge of current industry and regulatory trends, standards and methodologies.
- Actively participate in program teams, as well as collaborate effectively across functions and external partners.
- Other duties and responsibilities as required by departmental and business needs.

Requirements

- A minimum of five years of industry experience, including strong track record of hands-on experience in R&D and the biotechnology industry.
- Ph.D or M.S. in Immunology, Biology or related field of study.
- Hands on laboratory experience developing immunoassay-based bioanalytical methods using state-of-the-art technologies (such as MSD platform).
- Working experiences with biologics is highly desirable.
- Knowledge of regulatory requirements, including GLP, GCP, ICH and other applicable guidelines for Bioanalytical development in support of clinical trials.
- The successful candidate shall demonstrate a proven track record in development and have experience with biologics and understanding of FDA/EMA guidelines.
- Experience in outsourcing and managing CROs for regulated (GLP, GCP) studies.
- Ability to think critically, synthesize and extract simple principles from complex datasets, communicate effectively across broad spectrum of audience both internal and external, excellent written skills.
- Excellent organizational skills, attention to accuracy and detail, and the ability and willingness to multi-task as needed.
- This individual will be highly analytical, goal-oriented, and timeline sensitive while maintaining high quality standards.
